### Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

## DETAILED ACTION

### *Claim Rejections - 35 USC § 102*

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1-8 and 15-23 are rejected under 35 U.S.C. 102(b) as being anticipated by Sinderby et al. (WO 99/62580).

The Sinderby et al. reference discloses a apparatus for controlling positive pressure assist to a patient during expiration comprising a detector of a level of electrical activity of a patients respiration related muscle (see Figure 2) and a controller that includes a neuro-ventilatory efficiency computation device 601 to control the operation of a level of pressure assist by unit 604. Furthermore, the Sinderby et al. reference discloses a control arrangement 700 in Figure 11 to detect preset levels of EMG intensity to control the automatic operation of PEEP ventilation. Also, attention is directed to page 7, lines 22-26 where it is further stated that the Sinderby et al. device is applicable with most any respiratory muscle signal (i.e. that includes at least inspiration and expiration).

In regard to claims 1-8 and 15, the method as claimed would be inherent during normal use and operation of the device.

*Conclusion*

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. The Leonhardt et al., Zarychta, and Sinderby et al. references pertain to respiratory control systems with associated respiratory muscle sensing and pressure control.

Claims 9-14 and 24-30 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.
